

Polycom® Vortex® - SoundStation VTX 1000™

Quick Install Packs

Features and Benefits

Polycom's Quick Install Packs give you the convenience of a pre-configured voice conferencing system, complete with the inter-connection accessories you need, for fast and easy installation and operation. Packages include a Vortex EF2241, a SoundStation VTX 1000, microphones, loudspeakers and cabling.

Feature

Four different kits, with your choice of boundary or ceiling microphones and your choice of "ceiling tile" or ceiling "can" loudspeakers

User-friendly interface via the SoundStation VTX 1000

Package easily connects to your video codec

Fast, easy installation

System is pre-configured for use

Wideband telephone audio (when another SoundStation VTX 1000 is called)

Vortex echo and noise cancellation

Ability to add additional Vortex devices to your system

Benefit

Put microphones where you need them, depending on how the room is used or laid out, and install loudspeakers that best match your facility's needs.

No learning curve - you can immediately start using this system and enjoy the great audio quality

The included cables connect to your video codec to give you simultaneous wideband voice and video calls

No need to have a meeting room "off-line" while a system is being installed - your Quick Install kit can be installed and used the same day!

You don't need to spend time setting up the system - this is as close to "plug and play" that you can get with an installed voice conferencing system

Enjoy amazing voice quality - you didn't know phone calls could sound this good!

Ensures that your room will produce only the best sounding voice quality throughout your network

Supports larger rooms with additional microphones
